

CLAIMS

What is claimed as being new and desired to be protected by LETTERS PATENT of the United States is as follows:

5

1. A latex glove removal and disposal device for facilitating a sanitary removal of a latex glove from a hand comprising, in combination:

10 a container having a generally rectangular configuration, the container having an open upper end, a closed lower end, a front wall, a back wall, and opposed side walls, the closed lower end having an enlarged base secured thereto, the opposed side walls each having a metal bar extending outwardly therefrom downwardly of the open upper end;

15 a cover member dimensioned for positioning over the open upper end of the container, the cover member having a closed upper end, an open lower end, a front wall, a back wall, and opposed side walls, the front wall of the cover member having an opening therethrough, the closed upper end having a transparent window therein, the opposed side walls of the cover member each having a magnetic bar extending outwardly therefrom adjacent to the open lower end for mating with the metal bars of the container in a closed orientation; and

20

25 a glove removal apparatus secured to the container, the glove removal apparatus having a generally inverted L-shaped configuration defined by a lower vertical member and an upper

horizontal member, the lower vertical member secured to the front wall of the container, the upper horizontal member being disposed over the open upper end of the container, the upper horizontal member tapering outwardly to a pointed free end that is positionable between a person's wrist and an opening of a latex glove to facilitate removal of the latex glove from the person's hand.

2. A latex glove removal and disposal device for facilitating a sanitary removal of a latex glove from a hand comprising, in combination:

a container having an open upper end, a closed lower end, a front wall, a back wall, and opposed side walls;

a cover member dimensioned for positioning over the open upper end of the container, the cover member having a closed upper end, an open lower end, a front wall, a back wall, and opposed side walls, the front wall of the cover member having an opening therethrough; and

a glove removal apparatus secured to the container that is positionable between a person's wrist and an opening of a latex glove to facilitate removal of the latex glove from the person's hand.

3. The latex glove removal and disposal device as set forth in claim two, wherein the closed lower end of the container has an enlarged base secured thereto.

4. The latex glove removal and disposal device as set forth in claim two, wherein the opposed side walls each have a metal bar and the extending outwardly therefrom downwardly of the open upper end and the opposed side walls of the cover member each have a magnetic bar adjacent to the open lower end for mating with the metal bars of the container in a closed orientation.

5. The latex glove removal and disposal device as set forth in claim two, wherein the closed upper end of the cover member has a transparent window therein.

6. The latex glove removal and disposal device as set forth in claim two, wherein the glove removal apparatus has a generally inverted L-shaped configuration defined by a lower vertical member and an upper horizontal member, the lower vertical member secured to the front wall of the container, the upper horizontal member being disposed over the open upper end of the container.

7. The latex glove removal and disposal device as set forth in claim six, wherein the upper horizontal member tapers outwardly to a pointed free end that is positionable between a person's wrist and an opening of a latex glove to facilitate removal of the latex glove from the person's hand.
